

Individual reflection

Attende: dalsher jalal kertan

Course: agile software management

A part of what I want to learn is work with projects that develop my abilities in terms of professional and personal aspects. I feel already that the lectures have provided somewhat of continuous learning with the sprints on how to manage a project from what seems to be an idea at first to a task, planning and performing the task. What i would like to learn more is how to develop sets of skills in software project management based on optimizing quality, time and essentially cost. That is a simplified overview on what i would like to accomplish and I know that this is a time consuming task that is knowledge based and requires a lot of experience.

I can help the team by taking responsibility in reading all the course material from provided lectures and answer all trigger questions for assignments or overall questions based on that material. I am going to thus take active participation in the group effort when it comes to assignment. Something that I like to work on that just interests me is the possibility to build a supportive group where all members can feel like they are participating. It could be participating in writing code or overall theoretic assignments.

Majority of the team are from the IT-programme which gives me an opportunity to both learn and teach. What i will be learning would probably be code-based knowledge since IT-students are specialized in that area. I will probably be teaching the IT-students alot about operations management and overall management i've learned throughout my candidate.

The whole purpose of scrum is building sprints of work that eventually establishes aimed results for the project. In my case i would be assigned a small part of the work to finish as all other members. I will be ofcourse help all the other teammates with their parts and build a common team effort. but this type of work is only for team-based assignments, individual assignments will be done selectively ofcourse without assistance from the group.
