

Social contract

When it comes to software there is a lot of work in the background that isn't visible in codes. That type of work would for example be oral discussion, planning, management and coordination all which is required individual and team effort. For this course this is what we want to learn as a collective team where individual contributions make up for the team effort of managing software projects in terms of time, cost and quality. This is essential in all corporations that are integrated in software development.

Commitment

Everyone in the team is expected to follow the course material and contribute to assignments accordingly. The team is also expected to provide support and help to members in the group and actively participate in oral and chat discussions.

In the case that you are unable to attend/run late or for any reason might be unable to fulfill what's expected, you must communicate this as soon as possible so that it's easier to be understanding rather than irritated. We also want an environment where we are encouraged to ask each other for help. If we feel that someone is not participating as expected we will talk about it together and try to figure out a way to improve the situation.

Meetings

The private meetings should only occur at a distance because of the current situation with covid-19. There will be no certain rules about the camera and microphone except that team members are expected to have a microphone available for meetings to be able to participate actively. The group is expected to plan meetings for assignments and time for updating social contract continuously throughout the course.

Communication

The team is currently communicating via chat on 3rd party app Discord but will utilize meetings on Zoom.

The group may use these means of communication at any point in time and it is everybody's own responsibility to set notifications as not to be disturbed. However, this does not mean that you are expected to be able to respond straight away but at your earliest convenience.

How we work

We work from home but will cooperate online as needed through voice chat and may use pair programming with software for screen share/remote control. To manage our project, keep track of our progress and avoid redundant work, we will use a Scrum-board in Jira. The project files themselves will be stored on GitHub for ease of access and version control.

UPDATE NOTES:

- team feeling with mineset
- coming up with a lot of ideas: **Dalle, Andreas, Timmy, Albin, Georges-Tinderliknande fast för att bestämma** mat eller **film** eller liknande.
- create specific categories on discord
-
